FREE Data Center & Office IT Decommissioning.

Decommissioning and Dismantling Data Center and Office IT Infrastructure.

Our ITAD ECO Plus solution has been created to help IT executives, network engineers and technicians to retire used rack mountable servers, network hardware and storage arrays in a manner that is quick, legal, ethical and environmentally responsible.

Our IT company can remove and recycle all obsolete servers, switches, and rack hardware whilst also providing digital data destruction services for storage systems. We will purchase any used or excess servers, switches and storage arrays that you wish to sell, providing they can be repurposed for further use. If you have over 100 pre-owned servers, switches and storage arrays you could qualify for our FREE IT decommissioning service.

What is office or data center IT hardware decommissioning?

IT Hardware decommissioning is the practice of dismantling, packaging and removing retired computing, storage and networking equipment from data centers or large-scale offices. Most data center administrators (DCA) and office IT managers will work with an IT decommissioning company to either remove, relocate, recycle or resell racks of servers, storage systems and network switches.

If an office IT director or data center DCA are only upgrading a few groups of server or storage clusters they might not need the services of a data center decommissioning business. In fact, most IT executives will work with just a single ITAD company, as most ITAD companies provide IT decommissioning, dismantling, removal and recycling services by default. Furthermore, an ITAD company will often purchase pre-owned servers, used storage systems and retired networking switches providing they are reusable.

ITAD businesses don't just manage the recycling of old servers and obsolete network hardware, they also look after the disposal of devices containing sensitive data. Digital data destruction such as hard drive wiping and shredding is an essential part of both data center decommissioning and office IT hardware disposal.

As you can imagine both office and data center decommissioning involves a lot more than just dismantling rack mounted hardware, taking out network cables, and de-installing old server racks. The decommissioning process is usually part of an office or data center computer systems upgrade plan.

What is in an IT hardware decommissioning plan?

Nearly all IT administrators create a project plan detailing strategies for managing; IT asset implementation, systems maintenance and the replacement of aging IT infrastructure. The project plan will often include a hardware decommissioning checklist. In terms of decommissioning IT equipment, as your IT reaches the end of its lifecycle our ITAD company can help you to fulfil every aspect of your IT decommissioning checklist. We can work with the CIO, IT administrator and the IT executives responsible for decommissioning IT equipment in as much as providing the de-installation of computers, servers, cabling, storage devices, racks and any other office or data center equipment. If you're planning an IT upgrade and have planned to sell decommission computers, servers, switches and storage systems, our ITAD team will purchase your pre-owned IT assets.

If you are planning the demolition of a data center we can also help with the removal and relocation of servers still in use. Our ITAD facilities provide secure storage, data destruction, exceptional hardware testing and remarketing services.

What IT Assets Do You Purchase from Decommissioned Data Centers & Offices?

Our ITAD company will remove, recycle and even purchase preowned IT inventory such as: servers, desktops, laptops, switches, routers, and other IT equipment. In addition, we will purchase used storage arrays and other types of rack mountable computing hardware.

Help With The FREE Decommissioning Of IT Hardware

Our ITAD company will freely help your office or data center to decommission used racks of servers, storage arrays and network switches. We will buy most pre-owned computer equipment and IT hardware. If you have over 100 pre-owned IT assets you wish to sell (e.g.: used rack servers, storage racks, switches and network hardware) then our ITAD business can help decommission your data center or office IT equipment for FREE.
