FREE Computer Equipment Removal & Disposal.

Help with decommissioning, removing and disposing of IT assets reaching the end of their lifecycle.

Most IT administrators, directors and CIO's will tend to build an operational plan based upon the Information Technology Infrastructure Library (ITIL) framework. ITIL is great for setting out the details and practices for IT activities such as IT service management (ITSM). However, ITIL planning is probably best known for IT asset management (ITAM) which holds a subset of activities responsible for data center hardware decommissioning, such as server decommissioning checklists, and IT infrastructural upgrade planning.

Naturally, both offices and data centers will utilize a server decommissioning process document or use a template system decommissioning plan for retiring IT assets. However, the removal and disposal costs can never truly be planned for. The cost of dismantling and removing racks, servers, network switches, cabling, storage arrays, and even office computers constantly fluctuate with the changing cost of logistics (shipping), skilled and non-skilled labor.

To help you develop a more predictable ITIL office and data center decommissioning process, we can reduce your decommissioning, data destruction, IT hardware removal and recycling costs to \$0.00. Put simply, our ITAD service can be provisioned in your ITIL IT asset decommissioning plan for free providing you qualify for our FREE ITAD ECO Plus service.

The ITAD ECO Plus program has been created to help dispose of retired IT equipment in the most ecologically sustainable way possible. Whether that's us buying preowned servers, switches, storage arrays and office pcs for refurbishment and extended usage. Or, simply collecting and recycling computer hardware that has reached the end of its usefulness.

FREE COMPUTER EQUIPMENT REMOVAL OFFER

Retired Computer Hardware Removal and Disposal Offer

Free Computer Hardware Collection & Disposal Offer

Are you about to upgrade and decommission data center equipment such as clusters of rack servers, storage systems and switches? Or, are you refreshing an office computer network and decommissioning used workstation pcs and office network hardware? If you have 100 or more pre-owned servers, used switches and retired business computers you could qualify for our free removal and disposal offer. Contact our ITAD team today for more information:
